Speech Technologies

Get a top-quality speech technologies at lower costs

Use Born Digital high-quality speech technologies, such as Speech Recognition, Speech Synthesis, Speaker Recognition or Voice Biometry at lowest possible cost. Unlike other solutions on the market, our All-In-One platform requires only one integration. On top of that, we can make your voice assistants stand out from your competition using custom neural voice. All that at a reasonable price and highest quality.

✓ HIGH ACCURACY   ✓ EASY INTEGRATION   ✓ LOWER COSTS

Our Speech Recognition Technology

Create transcripts of customer calls and voice messages with high accuracy and lower costs. Our technology covers all languages and is best used within our Customer Insight Analytics (which analyzes large number of customer interactions).

Our Speech Synthesis Technolgoy

Create a unique synthetic voice that matches your brand identity. You only need a limited set of recordings to create a truly natural sounding voice.

With our technology, you will stand out from your competition and improve the customer experience at the same time.

▶ Our Speaker Recognition Technology

Our speaker recognition technology breaks your final transcript into clear segments based on who was speaking and allows you to play over the selected parts.

This technology is again best used as part of our Customer Insight Analytics – allowing you to analyze big volume of data at a significantly lower cost.

✓ Our Voice Biometry Technology

This technology allows you to authenticate your customers over the phone based on their voice.

On top of that, we can adapt the technology specifically to your business case and therefore reduce the implementation costs.
